RUSSEL DAVE R. BAYANADO

Software Engineer
Malvar, Batangas, Philippines | +63 955 476 3529 | rdbayanado@gmail.com

SUMMARY

Full-stack software engineer with 6+ years of experience in .NET and Angular across financial services, life sciences, healthcare and education platforms. Owns frontend and API layers for regulated, data-sensitive systems. Experienced in AI-assisted and agentic development workflows, and disciplined about writing and reviewing code by hand where data sensitivity demands it.

PROFESSIONAL EXPERIENCE

Remote.com (Philippines) | Software Engineer — Jun 2026 to Oct 2026

Engaged through Remote.com on a securities trade processing and corporate actions platform

- Own the Angular frontend and .NET API layer of a corporate actions and trade processing platform in a two-person team, delivering features end to end.
- **DataHub, a report and data export platform.** Built on .NET with Snowflake and SQL Server, generating password-protected CSV, Excel and PDF files. Large exports run as Hangfire background jobs, streaming rows in bounded, size-aware batches to keep memory use under control on multi-million-row exports.
- Built PDF ingestion for OTC trade confirmations, replacing manual data entry, and delivered automated trade file download and monitoring that replaced a legacy console app.
- Designed with Clean Architecture, CQRS (MediatR) and vertical slices, and built a dynamic AND/OR report filter builder so users create their own report queries.
- Use agentic AI coding workflows to speed up implementation, documentation and refactoring, with human review on every change.

DXC Technology | Product Developer, Life Sciences Regulatory Platform — Sep 2022 to May 2026

- Developed full-stack features for a global regulatory platform supporting clinical submissions in 5+ regions (AU, US, EU, JP, KR and others).
- **Sensitive, regulated clinical data.** Wrote, tested and reviewed all code manually under strict data-handling controls, with no AI assistants involved.
- Built drag-and-drop file management, validation systems and document property interfaces that reduced manual steps and rework for submission teams.
- Translated regulatory requirements and business logic into maintainable software, working with Business Analysts and stakeholders.
- Diagnosed and fixed critical bugs across multiple modules, improving stability and reducing production issues.

Prosper I.T Consulting (Remote Freelance) | Part-time Technical Instructor — Feb 2025 to Sep 2026

- Maintained and extended the LMS with new features that improved the student learning experience.
- Worked with instructors and operations to turn platform improvement ideas into technical solutions.
- Mentored students on software development best practices and prepared them for entry-level developer roles.
- Tracked course completions to support learner outcomes.

IMBC Services Corporation | Developer — Jun 2021 to Aug 2022

- Built healthcare analytics dashboards and clinic management tools for medical workflows.
- Built a responsive Angular appointment site that streamlined booking and reviews.
- Migrated and validated client data, preserving integrity across platform databases.
- Implemented client-requested features and resolved reported bugs.

Accenture | Associate Software Engineer — Apr 2019 to Nov 2021

- Built embedded C automation tools that replaced manual test execution, cutting testing time and human intervention.
- Made end-to-end test runs continue after errors instead of needing manual restarts.
- Built a logging system for errors and test results to improve traceability and debugging.
- Wrote unit tests to catch issues early in development.

TECHNICAL SKILLS

- **Frontend:** Angular (standalone components), RxJS, TypeScript, JavaScript, HTML5, CSS3, PrimeNG, Kendo UI, Material UI, Bootstrap
- **Backend:** .NET (Core and Framework), C#, ASP.NET Core Web API, Entity Framework Core, ADO.NET, MediatR (CQRS), Hangfire, Python, Swagger/OpenAPI, JWT/OAuth authentication
- **Databases and Data:** SQL Server, PostgreSQL, Oracle, Snowflake, Supabase, LINQ, stored procedures
- **Architecture:** Clean Architecture, Domain-Driven Design principles, CQRS, vertical slice, modular monolith, SOLID and design patterns, RESTful API design, event-driven background processing, legacy system modernization, file and SFTP ingestion, PDF data extraction
- **Testing:** MSTest, NUnit, xUnit, Moq, Jest/Jasmine, Postman
- **Cloud, DevOps and Tools:** Microsoft Azure, AWS, Docker, CI/CD pipelines, Git, conventional commits, Jira, Visual Studio, PowerShell
- **AI and Agentic Development:** Agentic coding workflows, AI-assisted development, prompt and context engineering, Model Context Protocol (MCP) integrations, AI-assisted code review, test generation and refactoring, spec-driven development
- **Practices:** Agile/Scrum, code review, technical documentation, mentoring
- **Other:** SEO, Google Analytics, automation

EDUCATION

Polytechnic University of the Philippines | BS in Information Technology 2015 to 2019
